

FOR IMMEDIATE RELEASE

## Water-Right Announces New Features for Dealers

*The Ozone Generator Kit, Salt Monitoring Feature, and Remote (2<sup>nd</sup>) Meter option available in September*

**APPLETON, Wis.** — Water-Right, Inc., a leading manufacturer in the water treatment industry with a history of creating new products and standards for the industry, is proud to announce updates to select WaterCare and Evolve products, which will allow these products to accept three new features: Ozone Generator capabilities, Salt Monitoring and Remote (2<sup>nd</sup>) Flow Meter option.

### **Ozone Generator Kit**

Ozone technology is one of the most powerful sterilants in the world and it cleans filters without the use of chemicals or harmful by-products. As air is being drawn into the tank to recharge the unit, Water-Right's Ozone Generator (Model No. OZ1-A) convert's normal oxygen (O<sub>2</sub>) to ozone (O<sub>3</sub>) with the use of an electrical field. The ozone is then drawn into the filter tank which helps clean the unit under certain water conditions and extend the unit life between services. The ozone generator will automatically turn itself off after regeneration.

The Ozone Generator Kit is an easy “plug and play” in-field add-on for WaterCare and Evolve systems. WaterCare and Evolve dealers can order this kit at any time for a simple onsite installation. Dealers simply plug the two-prong adapter clip into the unit board and set the programming; no additional transformers, relays or power supplies are needed.

*Water-Right Ozone Generator Kit (Model No. OZ1-A)*

### **Salt Monitor**

Water-Right's Salt Monitor (Model No. CV-3395) features a patented product design and the same easy “plug and play” installation as the Ozone Generator Kit. No additional transformers, relays or power supplies are needed. It is a standard function of the controller on select products.

This feature works by taking a conductivity reading during the water softener's brine cycle. The program then converts the reading into a percentage value of brine concentration. If the reading is low, an audible and visual alarm is triggered, notifying the homeowner that additional salt is required.

*Water-Right Salt Monitor (Model No. CV-3395)*

The Salt Monitoring feature will be available starting in September and can be ordered on select WaterCare and Evolve systems.

### **Remote Flow Meter**

The Remote Flow Meter capability is intended to give the user the ability to record and monitor a second stream of water and is ideal for tracking irrigation water usage, reclaim water monitoring, gray

water monitoring, or any other application where the user may want to record a second “fluid” usage.

The Remote Flow Meter is capable of monitoring streams of up to 350 gallons per minute. Compatible meter sizes range from one inch to three inches.

All Remote Flow Meters come with a 15-foot cord, which can be extended up to 75 feet using 22-gauge wire.
